

SEO Tag Checker

Scoring Logic & Reference Guide

Dream Studio Solutions · Premium Digital SEO Agency

Purpose

The SEO Tag Checker analyzes any public URL and produces a composite 0–100 score reflecting the technical SEO health of the page's metadata, content structure, media richness, structured data schemas, and social sharing tags.

Six Scoring Categories

Title Tag (20%)

Meta Description (15%)

Heading Structure (15%)

Media & Links (15%)

JSON-LD Schema (25%)

Open Graph Tags (10%)

Score Interpretation

80–100 Excellent — Strong technical foundation

60–79 Good — Improvements recommended

< 60 Needs Work — Significant gaps identified

Overall Score Formula

The overall score is computed as a weighted sum of six category scores, then floored to an integer.

```
overallScore = Math.floor(  
  titleScore      × 0.20  // 20% – Title tag  
+ metaScore      × 0.15  // 15% – Meta description  
+ headingScore   × 0.15  // 15% – H1-H5 structure  
+ mediaLinksScore × 0.15  // 15% – Images, video, links, sitemap  
+ structuredDataScore × 0.25 // 25% – JSON-LD schemas • highest weight  
+ ogTagsScore    × 0.10  // 10% – Open Graph tags  
)
```

Weights sum to 1.00. Math.floor is applied at the end — fractional points are discarded, never rounded up.

Category Weight Summary

Category	Chip	Weight	Max Contribution
Title Tag	T	20%	20 pts
Meta Description	M	15%	15 pts
Heading Structure	H	15%	15 pts
Media & Links	I / L / R	15%	15 pts
JSON-LD Schema	J	25%	25 pts
Open Graph Tags	OG	10%	10 pts
TOTAL	—	100%	100 pts

Title Tag Score (weight 0.20)

Condition	Score
Present, length 30–60 characters	100
Present, length outside 30–60 chars	75
Missing	0

Meta Description Score (weight 0.15)

Condition	Score
Present, length 120–160 characters	100
Present, length outside 120–160 chars	75
Missing	0

Heading Score (weight 0.15)

Weighted average: $H1 \times 0.40 + H2 \times 0.25 + H3 \times 0.20 + H4 \times 0.10 + H5 \times 0.05$

Level	Sub-score formula	Notes
H1	<code>count=1 ' 100; count=0 ' 0; else max(0, 100(n1)×20)</code>	Multiple H1s are penalised
H2	<code>min(100, count×20)</code>	Needs e1
H3	<code>min(100, count×15)</code>	Needs e1
H4	<code>min(100, count×12) if present, else 0</code>	Optional bonus
H5	<code>min(100, count×10) if present, else 0</code>	Optional bonus

JSON-LD Structured Data Score (weight 0.25)

Points awarded per detected @type, capped at 100. LocalBusiness / Organization / ProfessionalService are mutually exclusive (only one earns the 40 pts).

Schema @type	Points
LocalBusiness OR Organization OR ProfessionalService	40 (mutually exclusive)
FAQPage	+20
WebSite	+15
Service / Article / BreadcrumbList	+10 each
WebPage / ImageObject / Person	+5 each
Any other recognised type	+5
No JSON-LD at all	0 (no floor)
Maximum	100
