

Hero review:

BG Images – keep ours

BG fallback color – keep ours

Overlay technique – spec says: `bg-gradient-deep-twilight` == deep navy 135deg` - standardize this to our value (`var(--navy-dark)`).

Overlay opacity - match spec at 20%, make spec 20%

Min-height - what is recommended?

H1 line 1 font - make ours explicitly Poppins instead of Poppins font-head?

H1 line 1 size - is using clamp ie, `clamp(2rem → 3.5rem)`”, preferred over a fixed px, ie 48px or 56px? I understand that it allows range, but which is preferred? For responsive mobile we use the other “md” and “sm” media query breakpoints, correct?

H1 line 1 weight - the 400 light + 700 bold is very nice and should be our new spec

H1 line 1 case - mixed case matches spec, make spec clear that mixed case is ok, the rule is no all upper caps...

H1 line 1 letter-spacing - add theirs. Is a negative number normal? ie -2.5px? Add to spec

H1 line 1 line-height - we need to use a the spec and “rem” never em, correct or no???

H1 line 2 (subtitle) font - make our spec Poppins

H1 line 2 size - we have `clamp(0.95–1.2rem) w400`”. Same question as the H1 line 1 size question. Need standardization.

H1 line 2 case - allow per updated spec

H1 line 2 letter-spacing - same question as on H1 line 1 letter spacing

Decorative vertical line - this is an error on the prod site and needs to always be ignored

CTA button - matches our spec

Travel in Style (travel-in-style):

section padding - match theirs 100px top and bottom, update our spec

Container max-width - standardize ours to max-w-7xl across the board, never 1280px

Inner text panel BG - add theirs `linear-gradient(90deg, #1a1c32 93%, transparent)`”, update our spec for sectional component innerlay inner text panels.

Inner padding - add

H2 size - use our H1 values

H2 weight - 400 + 700 bold very nice, make it our new spec

H2 letter-spacing - use theirs, add to spec

H2 color - use ours, make it our new spec

Body size - use theirs, make new spec

Body line-height - use theirs, but should we use “rem” instead?? I am not sure

Image box-shadow - add to our spec

Free Instant Quote (free-instant-quote):

Section padding - standardize to our updated spec

Form card H2 - user ours

Right column H3 - use ours (Poppins w400 navy) but at 600?

Form card BG - use a branded css value

Service Locations (service-locations):

H2 color - standardized to our css vars

City sub-headings - use ours update to our H5 spec

Champagne underbar - not all sections need an Champagne underbar, update spec. This section no Champagne title underbar needed, as it is more of a CTA type section.

Areas We Serve (areas-we-serve):

Area link font - what is the proper fix here? We have not yet added branded links to our demo page.

Area link size - our has fixed, but it says off scale?

Area link letter-spacing - non-standard negative tracking... what is the fix?

Area link color - this is not a violation, section specific, update branding requirements as ok

Why Choose Us (why-choose-us):

Section padding - standardize

H2 size - standardize

H2 color - ours is preferred styling when appropriate, as mentioned above, new spec

Subtitle size - update spec to us 30px

H3 card font - update spec to use Montserrat 25px (is this card specific?)

Card body - what is recommended here?

Airport Shuttle Service (airport-shuttle-service):

Body font-size - we have an updated spec?

Body line-height - same as mentioned above, pending standardization

Image container layout - flag this for later

Map / Social (map-contact-section):

Photo row padding - hmm...?? Flag for later

Social heading size - match spec

Contact strip padding - keep ours

Champagne divider - add theirs as a new part to section 14, Champagne underbars for SM
